Tillage for Grasshopper Control	VIII-b
Clearing Farmland	VIII-c(1)
Filling and Leveling Pot Holes on Cropland	VIII-c(2)
Weed Control	VIII-d

This report shows for each State preliminary data with respect to the extent of participation in the various conservation practices under the 1944 Agricultural Conservation Program. A more complete report will be prepared in September. For some states it will show a considerably larger volume of practices since complete reports were not available when this summary was prepared.

The program year or period during which practices could be carried out under the 1944 program was not identical in each State. The period covered for each State is indicated in the first table. The extent of each practice was obtained from applications or performance reports through county, State and Regional offices of the Agricultural Adjustment Agency. For some practices the data with respect to the number of farms may include some duplications because the general practice classification shown here may include two or more practices in a State. For example phosphate may be applied in several different forms of material, each of which may be considered a separate practice in a State handbook. To the extent that more than one type of such material is applied on the same farm, a duplication in number results. No duplication results however in the extent of the practice carried out or the credit earned. The entry shown as "credit earned" is the extent of the practice multiplied by the rate of payment in the handbook.
